GU-SECURY Automatic Door Lock

SIMPLY CLOSE THE DOOR

European technology in a North American Lock.

By simply closing the door the upper and lower 3/4" (20 mm) latchbolts will instantly engage.

By turning the key from outside or the knob from inside it will engage the 1" central deadbolt and block the top and bottom latchbolts to become a 3-deadbolts locking system.

The Advantages

- 1** The top and bottom 3/4" (20mm) tempered steel latchbolts always engage behind the keepers upon closing the door:
 - give more security
 - give better weather sealing performance
 - help reduce door warpage
- 2** No lifting of the handle to engage locking points
- 2** 1" (25mm) central deadbolt
- 3** 90 degree rotation of thumbturn or US-cylinder engages the deadbolt
- 4** Reversible latch
- 5** High grade 16mm Stainless Steel faceplate for higher corrosion resistance. Radius ends for a clean look and easy installation
- 6** Available in 45, 50 and 60mm backsets for 6' 8" and 8' doors. Extension with additional lock point is available for doors taller than 8'

Handle Sets – 45mm Plate for Multipoint Door Lock
